

## Supply Chain for Healthcare.

Healthcare Reform is shifting financial risk onto healthcare organizations while also holding them accountable for patient outcomes. In this new era of value-based reimbursement, successful healthcare organizations must deliver cost-effective *and* high-quality care. Striking this precise operational balance can seem impossible amid the unique complexities of healthcare organizations.

What's the answer?

### **Strategic Supply Chain Management.**

Historically underappreciated in many healthcare organizations, Supply Chain Management now sits at the strategic intersection of costs and outcomes: accurate provision of supplies impacts patient care, and smart vendor/inventory management impacts costs.

Strategic Supply Chain Management is driven by comprehensive, real-time data and analytics generated by ERP's. The integration and transparency created by an ERP not only allows healthcare organizations to better manage costs, but can also drive new operational improvements in patient care.

With joint expertise in ERP and the health sector, Mazik is best positioned to address the needs of healthcare IT – getting the right information in front of the right people at the right time.

Built on Microsoft Dynamics AX, MazikCare is a full-featured EMR/ERP system, that supports:

- PAR Level Agreement
- Tracking and monitoring of carts, vehicles, storage rooms and on-hand product and delivery in real time from anywhere.
- Strategic automation at every stage of the procurement cycle: from sourcing, to bid creation, to supply replenishment, to billing and more
- Expiration / Shelf Life Management
- Mobile device integration: Access to patient records from anywhere, at any anytime, and from any compatible device
- HIPAA security and privacy compliance
- Standard Drug Database Integration
- HL7, ICD, SNOMED, DICOM

# Get strategic with Supply Chain Management to thrive in the value-based healthcare environment of the future.

Strategic Supply Chain Management isn't just about making sure supplies are ready at a good price; it's about raising the value of the entire patient care experience. Optimizing supply chain with integrated, real-time data results in improved outcomes, measurable increases in customer loyalty, a reduction in cost and a staff whose time is never wasted.

For example: Every time a healthcare worker walks away from a patient care task in order to find a needed supply, cost and quality are impacted, and the opportunity for supply chain optimization exists. Whether it's a physician looking for an instrument, a nurse seeking an IV connector, or a lab tech who needs a chemical solution, when staff have what they need where and when they need it, there is systematic efficiency and accuracy, which translates to cost containment and high quality of care.

ERP for healthcare creates value by integrating, automating and optimizing supply chains. By relying on intuitive, mobile and secure technology solutions, healthcare organizations can fine-tune procurement and inventory while increasing staff productivity, lowering costs, and improving outcomes.

## Business Benefits:

### Support the Mission

Spend more time with patients, deliver more efficient and better quality of care, and enact streamlined, best-prepared, enterprise-wide supply chain management. Optimizing materials management means, at its core, an organization that is best positioned to support and deliver on its goals daily: in the emergency room, the pharmacy, the clinic, the doctor's office, everywhere, always.

### Automate Supply Logistics

Embrace strategic automation at every stage of the procurement cycle: from sourcing, to bid creation, to supply replenishment, to billing and more, optimized supply chain management removes steps from the process and puts more time in your staff's hands. When medication is dispensed, inventory levels are automatically adjusted and the replenishment cycle begins. The use of barcode and RFID in the process automate each step and keeps track of expensive equipment.

### Manage and Contain Supply Chain Costs

Better sourcing and procurement practices eliminate unnecessary cost and effort through the entire purchasing life cycle. Administrators are able to demonstrate that the best possible supply was procured at the best possible price.

### Strategic Inventory Management

Track and monitor carts, vehicles, storage rooms and on-hand product and delivery in real time from anywhere. Streamlining replenishment means more automation, reduced effort and lowered cost. Mobile device integration unchains material staff from computers and workstations.
